

Scope of Project:

New Age Blast Media® was validated for use by hobbyist Mark Armstrong on multiple Ford Broncos. **NABM®** was used to remove old paint and rust from frames and parts, in order to re-coat them.

New Age Blast Media® Medium 4070 and Fine 70/100 were chosen specifically for this project for its **performance, health, and environmental benefits.**

Worker Safety: Does **NOT** contain the toxic heavy metals founds in slags and other blasting medias.

Cleanliness: Dust is translucent, which allows for increased visibility and operator productivity.

Whiter Blast: Crushed glass delivers a natural, whiter-metal finish than many other sandblasting abrasives cannot equal.

Environmental benefits: Manufactured from 100% Recycled Container Glass **New Age Blast Media®** is chemically non toxic and inert.

100% Recycled Glass Blasting Media ° Safe for the Environment °
Safe for Workers ° NO Free Silica ° NO Heavy Metals

“I’ve used sand, coal slags, and glass beads in the past, and New Age cuts as well or better.”

—Mark Armstrong

“Great call on the amount of media...The resulting surface was perfect for paint adhesion. We painted everything...and it looks great!

We’ve been bragging to our car buddies about New Age media ever since. I’ve used sand, coal slags, and glass beads in the past, and New Age cuts as well or better. Plus, it is safer for the user and the environment; which was a concern for all of us. We recovered much of the used media (even reused some), and within weeks the remainder blended into the soil and completely disappeared.

I was a little concerned that the glass would be sharp and difficult to work with. It was no different that working with sand. I’ll use nothing else from now on. Thanks for your all your help and advice.”
